PRODUCTION WEBSITE PROJECT MANUAL

NomReNom Online Food Ordering Platform

A complete, step-by-step guide explaining website features, customer flow, administrator controls, screenshots, and database structure.

System: Apache + PHP 8 + MariaDB (MySQL) | **Frontend:** HTML5, CSS3, Bootstrap 5, JavaScript | **Backend:** Secure Custom MVC & REST APIs

1. Project Overview & Main Purpose

NomReNom is a professional, real-life food ordering website. It works like popular apps such as *GrabFood* or *Foodpanda*, but specializes in **fresh bakery surplus food rescue**.

Every day, high-end bakeries produce top-quality fresh croissants, baguettes, sourdough loaves, and pastries. Items unsold by the afternoon are 100% fresh, safe, and delicious. NomReNom connects these bakeries with customers and university students who can purchase them in **Snack Boxes** (40,000 VND) and **Meal Boxes** (70,000 VND) at up to **60% discount**.

Core Benefits:

- **For Customers:** Enjoy high-quality bakery meals at very cheap, student-friendly prices.
- **For Bakeries:** Recover ingredient costs from unsold daily items instead of throwing food away.
- **For the Community:** Help achieve zero food waste and support environmental sustainability.

2. What Is Included in the Website (Features & Pages)

A. Customer Storefront (Front-End)

Page / Module	URL Link	Description & Functionality
Homepage	`/index.php`	Modern hero banner, bakery surplus categories, featured daily boxes, search bar, and social proof.
Food Menu	`/boxes.php`	Category filters (Snack Boxes, Meal Boxes, Croissants, Artisan Loaves), product photos, prices, discount badges, and "Add to Cart" buttons.
Shopping Cart	`/cart.php`	Live item counter in header, interactive quantity changers (+ / -), item subtotals, order summary, and clear cart tool.
Checkout Flow	`/checkout.php`	Supports both **Registered Customers** and **Guest Checkout**. Customers select Store Pickup or Local Campus Delivery, and pay with MoMo, VNPay, Bank Transfer, or Cash.
Live Order Tracking	`/track.php`	Real-life 5-stage progress stepper (Order Placed → Confirmed → Preparing → Out for Delivery / Ready for Pickup → Completed). Supports search by Order Number or Phone Number.
Customer Reviews	`/feedback.php`	Community review showcase. Customers can select 1 to 5 stars, link their order code, write review comments, and view verified customer ratings.
Customer Login	`/login.php`	Sign-in for registered customers. **Sends a real-time security alert message to customer email upon every login**. Also contains a direct link for guest order tracking.
Customer Registration	`/register.php`	Customers enter their real email, name, and phone, and create their own custom password. Dispatches an activation welcome email.
Contact Us	`/contact.php`	Contact form for customer inquiries and bakery partnerships. Inquiries are stored directly into database and admin inbox.
About Us	`/about.php`	Company mission, food rescue impact statistics, and four editable team member profiles.

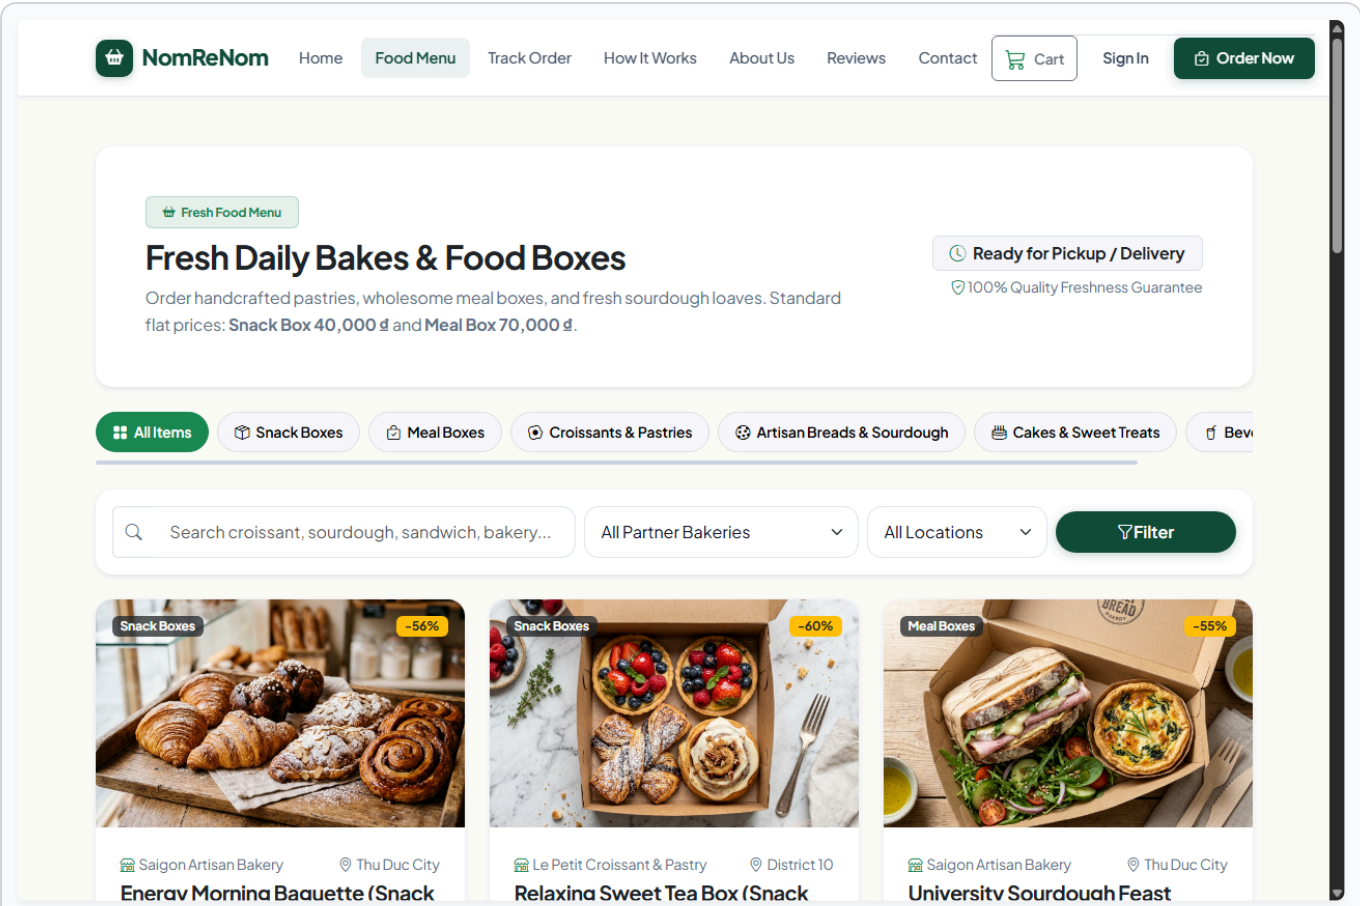

Figure 2.1: Food Menu with Categories, Pricing, Stock Counter, and Add to Cart

B. Administrator Operations Dashboard (Back-End)

The backend is located at `/admin/login.php` (Admin credentials: `admin@nomrenom.vn` | `Admin@12345`). It provides full management controls:

Admin Section	File Location	Admin Controls & Operations
Dashboard Analytics	`/admin/index.php`	KPI overview: Settled Revenue, Pending Revenue, Total Orders, Food Stock on Menu, Registered Customers, and 7-day order trend charts.
Customer Orders	`/admin/reservations.php`	Full list of orders with customer name, phone, fulfillment method, items, total price, and 5-stage status updater dropdown.
Food Products & Prices	`/admin/boxes.php`	Create, edit, or delete food items; update prices; set real-time available inventory; upload product photos.
Food Categories	`/admin/categories.php`	Manage categories (Snack Boxes, Meal Boxes, Croissants, Artisan Sourdough, Sweet Treats, Beverages).
Bakery Partners	`/admin/bakeries.php`	Manage partner bakeries, store locations, opening hours, contact numbers, and bakery logos.
Customer Messages	`/admin/messages.php`	Central inbox for messages sent from the Contact Us page. View inquiries, filter by read/unread, and reply via email.
Customer Reviews	`/admin/feedback.php`	Moderate customer ratings and comments. Toggle public visibility or delete inappropriate comments.
Payments & Transactions	`/admin/payments.php`	Reconciliation tool for MoMo, VNPay, Bank Transfers, and Cash on Pickup.

3. How the Website Works: Step-by-Step Flow

A. Customer Journey (Step-by-Step)

> **Step 1: Browse Food & Select Items**
>
> The customer opens the website, views delicious bakery items, checks original vs discounted prices, and clicks **"Add to Cart"**.

> **Step 2: Check Shopping Cart**
>
> The customer clicks the Cart icon in the header. They can change quantities or remove items. The system automatically recalculates the total price in Vietnamese Dong (₫).

> **Step 3: Checkout (Registered or Guest)**
>
> The customer clicks "Proceed to Checkout". They can sign in with their real account, or simply enter their Name, Email, and Phone Number as a **Guest** without needing an account.

> **Step 4: Select Fulfillment & Payment**
>
> The customer chooses either **Store Pickup** (collect at bakery counter in 60 seconds) or **Local Delivery** (hand-delivered to door). Then they select a payment method: MoMo, VNPay, Bank Transfer, or Cash.

> **Step 5: Order Confirmation & Receipt**
>
> The system creates a unique Order Reference code (e.g., `NRN-20261107-A646`), deducts inventory from the bakery stock, and dispatches a detailed order receipt to the customer's email.

> **Step 6: Live 5-Stage Order Tracking**
>
> The customer visits the **Track Order** page and enters their Order Number or Phone Number. They see real-time updates as the bakery prepares their food.

> **Step 7: Pick Up & Leave a Review**
>
> When the order is completed, the customer enjoys their food and clicks **"Leave a Review"** to share feedback on freshness, taste, and bakery service.

B. Customer Real Email & Security Flow

In NomReNom, customers use their real email addresses and create their own secure passwords:

- **Account Creation:** Customers register on `/register.php`. Their password is protected using one-way **Bcrypt cryptographic hashing** (`password_hash`).
- **Automated Welcome Email:** When registered, the customer receives an instant Welcome Email explaining their account benefits.
- **Login Security Alert Email:** Every time a customer signs in at `/login.php`, the system dispatches an automatic security email to their address with the exact date, time, browser, and IP address. If the customer did not sign in, they can click a button to reset their password immediately.
- **Email Dispatcher:** Integrated with direct TLS SMTP (Gmail, Outlook, custom SMTP) and backed up to `C:\xampp\htdocs\nomrenom\storage\logs\mail.log`.

4. Complete Database Architecture (`nomrenom_db`)

The platform uses a relational **MariaDB / MySQL** database called `nomrenom_db` containing **16 structured tables**:

Table Name	Key Columns	Role & Description in the System
`bakeries`	id, name, slug, address, district, phone, email, opening_time, closing_time, is_active	Stores information for all partner bakeries and their physical locations.
`categories`	id, name, slug, icon, description, display_order	Organizes menu items (Snack Boxes, Meal Boxes, Croissants, Sourdough, etc.).
`food_boxes`	id, bakery_id, category_id, name, price, original_value, available_qty, is_active	Holds all bakery products, their discounted prices, original values, and daily stock numbers.
`pickup_slots`	id, bakery_id, pickup_date, start_time, end_time, max_capacity, reserved_count	Defines daily collection time windows for each partner bakery.
`users`	id, full_name, email, phone, password_hash, role ('admin','customer'), is_email_verified	Stores customer accounts and system administrator credentials with secure Bcrypt password hashes.
`guest_customers`	id, full_name, email, phone, created_at	Stores contact details for customers who place orders without creating an account.
`reservations`	id, reservation_code, user_id, guest_id, bakery_id, fulfillment_type, total_amount, reservation_status	The main order table. Stores unique order numbers (NRN-YYYYMMDD-XXXX), delivery addresses, total amounts, and 5-stage status.
`reservation_items`	id, reservation_id, food_box_id, box_name, quantity, unit_price, subtotal	Stores each individual item and quantity included in an order.
`payments`	id, reservation_id, payment_method, gateway_provider, transaction_reference, amount, payment_status	Financial transaction log for MoMo, VNPay, Bank Transfers, and Cash payments.

Table Name	Key Columns	Role & Description in the System
`contact_messages`	id, name, email, phone, subject, message, is_read, created_at	Inquiries submitted via the Contact Us form, viewable in the Admin Messages portal.
`feedback`	id, reservation_id, user_id, food_box_id, customer_name, rating (1-5), comment, is_public	Customer reviews and star ratings. Moderate-able in the Admin Dashboard.
`admin_activity_logs`	id, admin_user_id, action, entity_type, entity_id, details, ip_address	Audit trail recording all administrator actions for security and compliance.
`password_reset_tokens`	id, user_id, token, expires_at, is_used	Secure temporary tokens for forgot-password requests.
`email_verification_tokens`	id, user_id, token, expires_at, is_used	Account verification tokens for email confirmation.
`phone_verification_tokens`	id, user_id, otp_code, expires_at, is_verified	One-Time-Password (OTP) tokens for phone verification.
`pilot_surveys`	id, student_name, student_email, snack_box_price_rating, meal_box_price_rating	Student price acceptance and sustainability survey responses.

5. How the Database Tables Connect (Relationships)

The tables in `nomrenom_db` connect to each other logically to manage the entire food ordering process:

> **1. Bakeries & Products:**
>
> Each partner bakery in `bakeries` has multiple food items in `food_boxes`. Each food item also links to a category in `categories`.

> **2. Orders & Line Items:**
>
> When a customer orders, one record is created in `reservations` with a unique code like `NRN-20261107-A646`. The individual items ordered are stored in `reservation_items`, pointing back to the food boxes.

> **3. Customers & Users:**
>
> If the customer is signed in, the order links to `users.id`. If the customer used Guest Checkout, it links to `guest_customers.id`.

> **4. Payments:**
>
> Every order in `reservations` has a corresponding record in `payments` recording payment method, transaction status, and amount.

> **5. Reviews:**
>
> When a customer writes a review, it is saved in `feedback`, linked to their order and bakery, and instantly displayed on the frontend and admin panel.

6. Summary & Conclusion

NomReNom is a **complete, functional, commercial food ordering platform**:

- It has **zero fake demo elements**: clean UI, real email verification, real customer password creation, and real database tracking.
- It provides a full e-commerce shopping experience: shopping cart, guest and registered checkout, multi-method payments, live 5-stage tracking, and reviews.
- It features a complete administrator back-end for orders, inventory, pricing, partner bakeries, payments, messages, and customer reviews.

NomReNom – Good Food, Better Prices, Zero Waste.
